

Emission reporting: requirements, estimations and tools

Dr. Kevin Hausmann

Central Emission System

Requirements

(a practical approach)

1. Estimate emissions
2. Put the correct number into the right cell of the NFR templates
3. Describe calculation in IIR
4. Submit to UNECE/CLRTAP by 15th of February (data) and 15th of March (report)

<http://www.ceip.at>

Table IV 1 (Revised UNECE/EMEP Reporting Guidelines ECE/EB.AIR/2008/4)				NECED pollutants										Other Heavy Metals (from 1990)							
NFR Aggregation for Gridding and LPS (GNFR)	NFR Code	Annotations	Longname	Notes	Main Pollutants (from 1980)				Particulate Matter (from 2000)			Main pollutant	Priority Heavy Metals (from 1990)			Other Heavy Metals (from 1990)					
					NOx	NMVOC	SOx	NH3	PM2.5	PM10	TSP	CO	Pb	Cd	Hg	As	Cr	Cu	Ni	Se

Table of contents

Last updated on 10 Sep 2009 by [Kevin Hausmann](#)

CAUTION: This is the upcoming and incomplete version of the German IIR expected to be submitted in March 2010. You may want to refer to [the current IIR](#). To track the progress of this new version please visit the [TODO page](#).

For complete and current emission data please refer to the [EEA CDR uploads](#). You also might find our [trend tables](#) and/or the [CEIP webpage](#) helpful. *This report does not include all the activity and emission data submitted.* It rather explains their preparation.

1. Executive Summary

2. Introduction

[2.1 National Inventory Background](#)

[2.2 Institutional Arrangements](#)

[2.3 Inventory Preparation Process](#)

[2.4 Methods and Data Sources](#)

[2.5 Key Categories](#)

[2.6 QA/QC and Verification methods](#)

[2.7 General Uncertainty Evaluation](#)

[2.8 General Assessment of Completeness](#)

3. Explanation of Key Trends

4. Energy

5. Industrial Processes

6. Solvent and other Product Use

7. Agriculture

8. Land Use and Land-Use Change

9. Waste

10. Other

11. Recalculations and Improvements

12. Projections

CEIP and UNECE secretariat

Technical Requirements

- High number of values in many timeseries
- Concurrent users
- Extensive calculation scripts
- Complex reports and dashboards
- Automatic data transfer
- Recalculation, access history, quality control

à Excel won't do

Estimation

Tier I: Simple method
Tier II: Advanced method
Tier III: Detailed method

Guidebook

<http://www.eea.europa.eu/themes/air/emep-eea-air-pollutant-emission-inventory-guidebook/emep>

Tier I: Simple method

$$AD \times EF_{\text{Pollutant}} = EM_{\text{Pollutant}}$$

$$2000 \text{ [tons of steel]} \times 4.6 \text{ [g lead per t steel]} = \\ 9.2 \text{ [kg of lead]}$$

Tier II: Advanced method

$$AD_{\text{Tech1}} \times EF_{\text{Tech1, Pollutant}} = EM_{\text{Tech1, Pollutant}}$$

$$AD_{\text{Tech2}} \times EF_{\text{Tech2, Pollutant}} = EM_{\text{Tech2, Pollutant}}$$

...

(TechX = Sinter, Pig Iron, Stellmaking etc.)

Tier III: Detailed method

Use facility data

What method (Tier I - III) do I choose?

Use the decision tree in the Guidebook,
most of the time key category sources
require higher tiers!
